none 260–480	95	¹⁰ ABE ¹¹ ABE	99N CDF 97G CDF	techni- ω , $\omega_T \rightarrow \gamma \bar{b}b$ color-octet techni- ρ , $\rho_{T8} \rightarrow 2\text{jets}$

¹ ABULENCIA 05A search for resonances decaying to electron or muon pairs in $p\bar{p}$ collisions. at $\sqrt{s} = 1.96$ TeV. The limit assumes Technicolor-scale mass parameters $M_V = M_A = 500$ GeV.

² CHEKANOV 02B search for color octet techni- π P decaying into dijets in $e p$ collisions. See their Fig. 5 for the limit on $\sigma(ep \rightarrow ePX) \times B(P \rightarrow 2j)$.

³ ABAZOV 01B searches for vector techni-resonances (ρ_T, ω_T) decaying to $e^+ e^-$. The limit assumes $M_{\rho_T} = M_{\omega_T} < M_{\pi_T} + M_W$.

⁴ The limit is independent of the π_T mass. See their Fig. 9 and Fig. 10 for the exclusion plot in the $M_{\rho_T} - M_{\pi_T}$ plane. ABDALLAH 01 limit on the techni-pion mass is $M_{\pi_T} > 79.8$ GeV for $N_D=2$, assuming its point-like coupling to gauge bosons.

⁵ AFFOLDER 00F search for ρ_T decaying into $W \pi_T$ or $\pi_T \pi_T$ with $W \rightarrow \ell \nu$ and $\pi_T \rightarrow \bar{b}b$, $\bar{b}c$. See Fig. 1 in the above Note on “Dynamical Electroweak Symmetry Breaking” for the exclusion plot in the $M_{\rho_T} - M_{\pi_T}$ plane.

⁶ AFFOLDER 00K search for the ρ_{T8} decaying into $\pi_{LQ} \pi_{LQ}$ with $\pi_{LQ} \rightarrow b\nu$. For $\pi_{LQ} \rightarrow c\nu$, the limit is $M_{\rho_{T8}} > 510$ GeV. See their Fig. 2 and Fig. 3 for the exclusion plot in the $M_{\rho_{T8}} - M_{\pi_{LQ}}$ plane.

⁷ AFFOLDER 00L search for top-color Z'_{top} decaying into $\bar{t}t$. The quoted limit is for Z'_{top} with decay width $\Gamma=0.012 M_{Z'}$. For $\Gamma=0.04 M_{Z'}$, the limit becomes 780 GeV.

⁸ ABE 99F search for a new particle X decaying into $b\bar{b}$ in $p\bar{p}$ collisions at $E_{\text{cm}}=1.8$ TeV. See Fig. 7 in the above Note on “Dynamical Electroweak Symmetry Breaking” for the upper limit on $\sigma(p\bar{p} \rightarrow X) \times B(X \rightarrow b\bar{b})$. ABE 99F also exclude top gluons of width $\Gamma=0.3M$ in the mass interval $280 < M < 670$ GeV, of width $\Gamma=0.5M$ in the mass interval $340 < M < 640$ GeV, and of width $\Gamma=0.7M$ in the mass interval $375 < M < 560$ GeV.

- ⁹ ABE 99H search for the color-octet techni- ρ decaying into a pair of color-triplet technipions which subsequently decay into $\tau + \text{jet}$. See Fig. 6 in the above Note on “Dynamical Electroweak Symmetry Breaking” for the exclusion plot in the $M_{\rho_{T8}} - M_{\pi_{LQ}}$ plane.
- ¹⁰ ABE 99N search for the techni- ω decaying into $\gamma\pi_T$. The technipion is assumed to decay $\pi_T \rightarrow b\bar{b}$. See Fig. 2 in the above Note on “Dynamical Electroweak Symmetry Breaking” for the exclusion plot in the $M_{\omega_T} - M_{\pi_T}$ plane.
- ¹¹ ABE 97G search for a new particle X decaying into dijets in $p\bar{p}$ collisions at $E_{\text{cm}} = 1.8$ TeV. See Fig. 5 in the above Note on “Dynamical Electroweak Symmetry Breaking” for the upper limit on $\sigma(p\bar{p} \rightarrow X) \times B(X \rightarrow 2j)$.
